

IHH RABBIT PAB

Cat.#: S217533

Product Name: Anti-IHH Rabbit Polyclonal Antibody

Synonyms: BDA1; HHG2

UNIPROT ID: Q14623 (Gene Accession - BC034757)

Background: This gene encodes a member of the hedgehog family of secreted signaling molecules. Hedgehog proteins are essential regulators of a variety of developmental processes including growth, patterning and morphogenesis. The encoded protein specifically plays a role in bone growth and differentiation. Mutations in this gene are the cause of brachydactyly type A1 which is characterized by shortening or malformation of the phalanges. Mutations in this gene are also the cause of acrocapitofemoral dysplasia.

Immunogen: Fusion protein of human IHH

Applications: ELISA, IHC

Recommended Dilutions: IHC: 50-200; ELISA: 2000-5000

Host Species: Rabbit

Clonality: Rabbit Polyclonal

Isotype: Immunogen-specific rabbit IgG

Purification: Antigen affinity purification

Species Reactivity: Human, Mouse

Constituents: PBS (without Mg²⁺ and Ca²⁺), pH 7.4, 150 mM NaCl, 0.05% Sodium Azide and 40% glycerol

Research Areas: Signal Transduction

Storage & Shipping: Store at -20°C. Avoid repeated freezing and thawing

Immunohistochemistry analysis of paraffin embedded Human thyroid cancer tissue using 217533(IHH Antibody) at a dilution of 1/50(Cytoplasm and Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with the fusion protein and then with 217533(Anti-IHH Antibody) at dilution 1/50.

The image on the left is immunohistochemistry of paraffin-embedded Human ovarian cancer tissue using 217533(Anti-IHH Antibody) at a dilution of 1/50.

In comparison with the IHC on the left, the same paraffin-embedded Human ovarian cancer tissue is first treated with fusion protein and then with D222535(Anti-IHH Antibody) at dilution 1/50.
