Background: The protein encoded by this gene is a member of the tripartite motif (TRIM) family, also called the 'RING-B-box-coiled-coil' (RBCC) subgroup of RING finger proteins. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. This protein localizes to cytoplasmic filaments. It is similar to a rat protein which is a specific partner for the tail domain of myosin V, a class of myosins which are involved in the targeted transport of organelles. The rat protein can also interact with alpha-actinin-4.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 220861 (TRIM3 Antibody) at a dilution of 1/40 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 220861 (Anti-TRIM3 Antibody) at dilution 1/40.

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using 220861 (Anti-TRIM3 Antibody) at a dilution of 1/40.

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with synthetic peptide and then with D262137 (Anti-TRIM3 Antibody) at dilution 1/40.
