

ZFP91 RABBIT PAB**Cat.#:** N225212**Product Name:** Anti-ZFP91 Rabbit pAb**Synonyms:** ZFP91 ZNF757 FKSG11**UNIPROT ID:** Q96JP5

Background: The protein encoded by this gene is a member of the zinc finger family of proteins. The gene product contains C2H2-type domains, which are the classical zinc finger domains found in numerous nucleic acid-binding proteins. This protein functions as a regulator of the non-canonical NF-kappaB pathway in lymphotoxin-beta receptor signaling. Alternative splicing results in multiple transcript variants. A read-through transcript variant composed of ZFP91 and the downstream CNTF gene sequence has been identified, but it is thought to be non-coding. Read-through transcription of ZFP91 and CNTF has also been observed in mouse. A ZFP91-related pseudogene has also been identified on chromosome 2.

Immunogen: The antiserum was produced against synthesized peptide derived from the Internal region of human ZFP91. AA range:401-450
