

FASCIN-INTERNAL MAB

Fascin(internal)

货号: 26013

基因符号: FSCN1

描述: Fascin(internal) 小鼠单克隆抗体

背景: Fascin is an ~58 kDa monomeric actin filament bundling protein. It is required to maximally cross-link the actin filaments into straight, compact, and rigid bundles, and contributes to the formation of filopodia that are critical for cell migration. Elevated levels of fascin have been found in metastatic tumors and are correlated with clinically aggressive phenotypes, poor prognosis, and shorter survival.
