

HUMAN CD21 PROTEIN, HFC TAG

Cat.#: 11597

Product Name: Human CD21 Protein

Size: 10 µg, 50 µg and 100 µg

Synonyms: C3DR;CD21;CR;CVID7;SLEB9

Target: CD21

UNIPROT ID: P20023

Description: Recombinant Human CD21 with C-terminal human Fc tag

Background: This gene encodes a membrane protein, which functions as a receptor for Epstein-Barr virus (EBV) binding on B and T lymphocytes. Genetic variations in this gene are associated with susceptibility to systemic lupus erythematosus type 9 (SLEB9). Alternatively spliced transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Sep 2009]

Species/Host: HEK293

Molecular Weight: The protein has a predicted molecular mass of 130.4 kDa after removal of the signal peptide. The apparent molecular mass of CD21-hFc is approximately 130-150 kDa due to glycosylation.

Molecular Characterization: CD21(Ile21-Arg971) hFc(Glu99-Ala330)

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
