描述: PTEN (R130G) Mouse Monoclonal Antibody

背景: Phosphatase and tensin homolog (PTEN) was identified as a tumor suppressor that is mutated in a large number of cancers at high frequency. It is one of the most commonly lost tumor suppressors in human cancer. During tumor development, mutations and deletions of PTEN occur that inactivate its enzymatic activity leading to increased cell proliferation and reduced cell death. Frequent genetic inactivation of PTEN occurs in glioblastoma, endometrial cancer, and prostate cancer; and reduced expression is found in many other tumor types such as lung and breast cancer.

免疫原: A synthetic peptide from the internal region of PTEN which includes the mutation of R130G, human origin.
